The Picture Hype Manual

Introduction

Picture Hype is the fast and easy way to create amazing pictures with photos and text that you can share with the world.

This manual will show you how to create these images, which we call Hypes and how to get the most out of Picture Hype.

This is the Picture Hype Main Screen where you start with the application.

From here you can create a new "Hype", work on a previous Hype or start over.

The Main Screen also has the basic directions for using the application.

Basic Tools

Tap on this button to add a photo to your picture (either from the Camera or the Photo Library). This is a good starting point for a Hype. You can add a photo and then add text to it.

Tap on this button to add text to your picture. In the text editor you can select font, color and text alignment (left, center, right). You can also use multiple lines

Tap on this button to bring up the “Scratch Pad”. The scratch pad is a list of all the photos and text that make up your picture. You can delete an item by swiping over it from right to left to bring up the delete button. You can also hide an item by clicking on it to toggle it.

Tap on this button to share the Hype you are working on. Right now you can Send E-Mail or save the picture to your Photo Library. In the future there will be more sharing options.

Add Text Screen

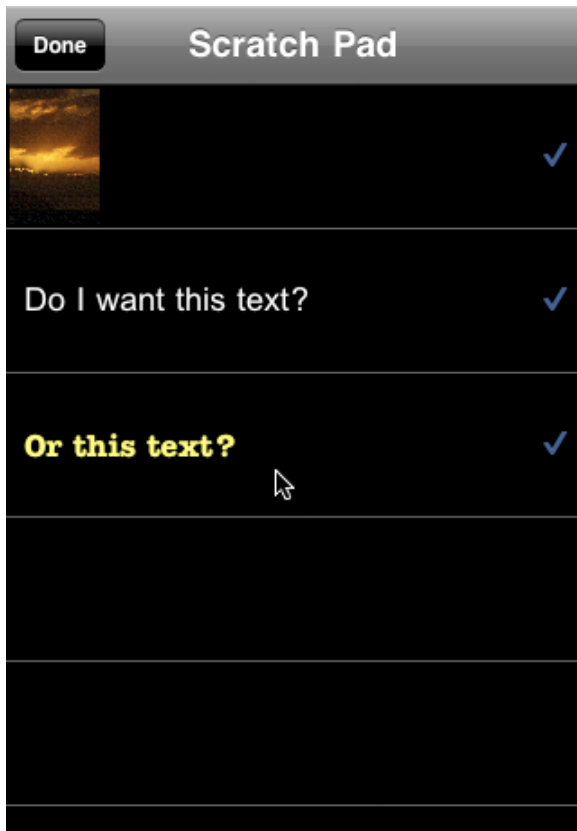

This is the Add Text Screen. You add text by typing in a message and then tapping on the Done button.

There is a button to select your font, which is set to “Georgia-Italic” in the example. There is also a button to select your font color, which is set to “Tangerine” in the example. In between those buttons is the text alignment, which can be left, center, right.

After you add text, you can drag it around the Main Screen to position it. You can also use pinching to zoom it. (Pinching is putting two fingers on the text at once and then moving them apart to make it bigger or close to make it smaller)

Scratch Pad Screen

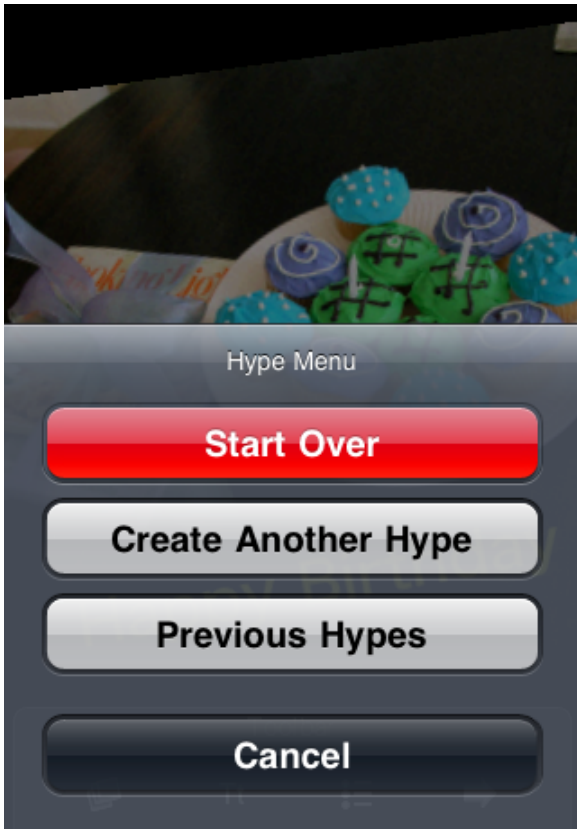

This is the Scratch Pad screen. This screen is a list of all the Photos and Text that make up your Hype.

Each item in the list can be hidden or deleted.

To delete an item swipe your finger from right to left over the item. A "Delete" button will appear. Tap on that button to delete the item.

Each item in the list has a check mark on the right. That check mark indicates that the item is visible. Simply tap on an item to toggle off the check mark and hide the item in the Hype. If you want the item to be visible tap on it again and the check mark will appear.

Hype Menu

Whenever you are on the Main Screen, you can shake your iPhone/iPod Touch to bring up the Hype Menu.

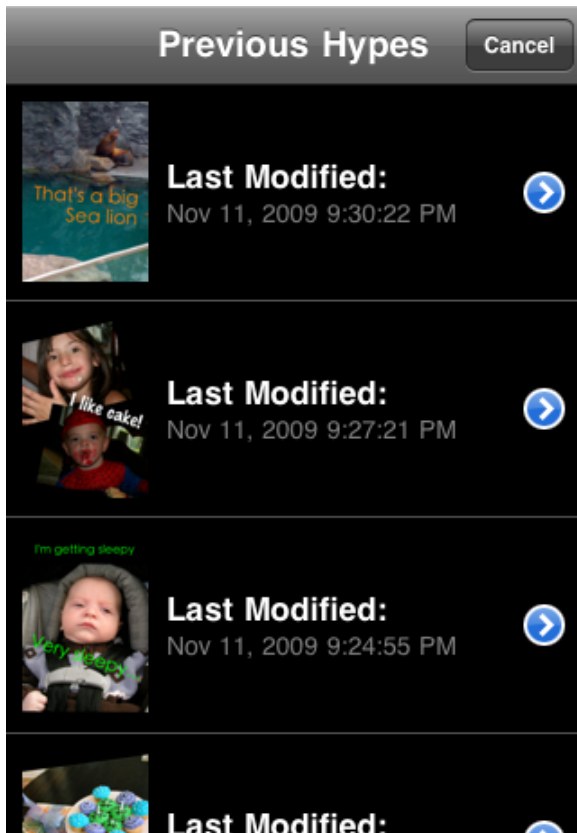

The Hype Menu allows you to:

Start Over: Remove all text and photos

Create Another Hype: Save the Hype you were working on and clear the screen to create a new one

Previous Hypes: Takes you to a screen where you can select to continue work on a Hype you had worked on previously

Previous Hypes Screen

This is the Previous Hypes Screen. Tap on any item in the list to work on that Hype.

Any Hype you had been working on will automatically be saved when you open the previous one.

Tips and Tricks

- * You can rotate your Photos and Text a full 360°
- * Whenever you leave the Main Screen your work is automatically saved
- * You can tap on any photo or text to bring up a menu that allows you to Delete the item, bring it to the front, or send it to the back
